# IRIS Standards Management

Manage and maintain structured information standards with a web-based, centralised repository

Manage structured information standards online
IRIS Standards Management is a web-based tool for defining, managing, and analysing structured information standards in a central hub.

Handle standards management data effectively
IRIS Standards Management enables organisations to coordinate and analyse standards data effectively before circulating information.

Ensure interoperable and aligned standards
With IRIS Standards Management, you can ensure that messaging standards comply with the given rules and structures of any organisation.

Analyse change impacts in advance
With IRIS Standards Management, you can assess the impact that changes in standards are likely to have on the end-users – before they are implemented.

Enhance collaboration with coalitions
To ensure effective coordination, collaboration, and communication, IRIS Standards Management uses a single repository for all information exchange.

Speed up the implementation of updates
By sharing and disseminating proposed or approved changes to all relevant stakeholders, you can significantly speed up the change release process.

SYSTEMATIC

IRIS Standards Management – enabling cross-coalition synergy

IRIS Standards Management (ISM) is a web-based capability that sits at the heart of the stakeholder community, providing a range of online services to access the latest and most relevant standards information.

Raise operational effectiveness

The key to successful information exchange across units and coalitions, both nationally and internationally, are well-documented and developed standards. These standards must be carefully managed in a configuration-controlled environment to ensure that all stakeholders have the same view of the information, making standards management a resource-intensive and time-consuming task.

By streamlining this adminstration, IRIS Standards Management cuts time from the demanding management process and allows for a more efficient use of resources, enhancing the operational effectiveness of your military organisation.

Cut down expenses

The intuitive interface and simplicity of IRIS Standards Management keeps deployment and training costs down. The interface has been designed to assist operational experts to develop and update standards with minimum technical knowledge. A military expert can develop the XML-based MTF standard without the need to understand XML syntax.

Strengthen interoperability

Keeping standards information updated in relation to the set rules and agreed standards are essential in ensuring cooperation in military systems between countries and coalitions. IRIS Standards Management enables you to import standards data from other nations and standards organisations and collectively revise standards information and rules, facilitating interoperability and collaboration.

Main enablers for managing information standards

IRIS Standards Management comes with an expansive list of features for enabling cross-coalition synergy. Some of the key features of IRIS Standards Management include:

- Intuitive web-based application, helping the user navigate data via a simple intranet, extranet, or internet connection
- Comprehensive standards repository, supporting ADatP-3, ADatP-3(A)/STANAG 5500 (edition 6), USMTF/MIL-STD 6040 standards, and national message standards
- Simplified adminstration of structured information, employing a configuration management toolbox that allows customers to model their quality assurance procedures in the system
- Full integration with the SitaWare suite, offering a unified command-and-control system with flawless messaging capabilities

Powerful military messaging and interoperability off-the-shelf

IRIS Standards Management seemlessly integrates with the other solutions from the IRIS suite. The IRIS suite covers all aspects of military messaging – from management and maintenance of standards to production and distribution of military messages.
