SitaWare Maritime

Enhanced situational awareness and C4ISR for the naval commander.

Experience a future proof C4ISR solution
The superior Command and Control, AI-powered solution for national headquarters, commanders of task groups, ships and individual units.

Fuse multidomain operational activity
Experience the ability to view the RMP, COP and RAP simultaneously for command decision making at sea, in HQs or both.

Enable enhanced situational awareness
Advanced C4ISR capabilities present a detailed Recognised Maritime Picture (RMP), which provides commanders with critical and timely decision-support.

Trust an operationally proven solution
SitaWare has 25+ years of operational C2 success. Its proven capabilities have been deployed across the maritime domain in a wide range of missions.

Ensure collaborative planning across all domains
Developed specifically for the maritime commander, SitaWare Maritime is a force multiplier that allows the seamless coordination of plans and orders.

Operate seamlessly with partners and allies
Out-of-the-box integrations enable seamless coordination with air and land commands, coalition partners, coastguard as well as other military or civilian partners.

SYSTEMATIC

SitaWare Maritime lays a strong foundation for operational success by addressing future requirements today. Regular updates ensure advanced **C4ISR** capabilities, making SitaWare the **Battle Management System** of the future.

"We now have a fully joint common operating picture across all three forces, which is really powerful. With one single situational awareness platform information-sharing and interoperability is seamless."

**Brian Matthews**
Commander, DFI

Littoral Operations

Ship to shore maneuvers demand a robust command structure, where effective planning and coordination are crucial. SitaWare Maritime significantly enhances situational awareness and delivers superior planning whilst safeguarding operational success.

AI-Enabled Software

Built-in AI provides a coherent overview of tracks from various sources, fusing them in near real-time. Anomaly detection flags possible threats and illegal activity early, providing automatic notifications of abnormal behaviours.
